

Digit Revision SwiftKit™

STREAMLINING Fingertip Revision Amputations

Digit Revision SwiftKit™ simplifies bedside fingertip revision amputation procedures in the emergency department

Optimal Rongeur Design
Specifically designed size & shape for revision amps

Bio-based Polymer Construction
Sustainable & recyclable

98% BIOBASED
The plastic used in this device is derived from natural sources

Single-Use Equipment
Requires no reprocessing & guarantees sharp rongeur tips

Multi-tip Freer
Curved and straight tip for elevating nail & tissue

Digit Revision SwiftKit™ streamlines revision amp procedures in the emergency department while saving time and costs, improving patient throughput, and reducing the reliance on CSP.

Digit Revision SwiftKit™

STREAMLINING Fingertip Revision Amputations

Included Sterile Accessory Kit
Includes everything needed for
revision amps at the bedside

Just grab lidocaine, prep
stick, gloves, and sutures!

- ☒ No Scavenger Hunt
- ☒ No Reprocessing
- ☒ Revision Amp specific equipment
- ☒ Faster patient care
- ☒ Improved ED throughput
- ☒ Improved patient experience
- ☒ Improved provider experience

Digit Revision SwiftKit™ saves over
30 minutes spent collecting supplies
by **eliminating the scavenger hunt**

"While fingertip revision amputations in the ED are an easy procedure, the logistics are a nightmare. I've spent more time gathering supplies, such as rongeurs and freers from the OR, than actually performing the procedure. This is frustrating for patients and providers alike, delays patient care, and is a common recurring challenge"

Greg Pereria, MD
OrthoCarolina
